

Stress and Social Environment in Population Health

2002 – 2005, SSHRC, \$144 000

With the emerging field of research on Population Health comes the need for the social sciences to position themselves and consolidate their approach regarding the impact of social dynamics on health and well-being. This research and development initiative will:

- **constitute a group, a network, a place and a interdisciplinary forum for the study of the social environment: the Vector S.E.S. (Stress and Social Environment)**
- **articulate current conceptual, methodological and empirical knowledge in an integrated model of the role of the social environment in health**
- **generate a portfolio of assorted protocols and methodologies**
- **create partnerships to establish a research agenda as well as promote knowledge transfer**
