SYNOPSIS

Louise LEMYRE, Ph.D. est Professeure titulaire à l'École de psychologie, Membre de l'Académie des sciences sociales de la Société Royale du Canada et Chaire de recherche McLaughlin sur les aspects psychosociaux du risque en santé des populations de l'Université d'Ottawa où elle dirige une unité de recherche sur l'analyse psychosociale de la santé et bien-être, GAP-Santé. Elle détient une maîtrise de l'Université de Colombie-Britannique (U.B.C.), un doctorat en psychologie sociale de l'Université Laval et un postdoctorat interdisciplinaire en épidémiologie sociale et sociologie médicale au British MRC Social Research Unit à l'Université de Londres (UK). Ses travaux portent sur l'évaluation contextuelle de l'environnement social et des perceptions subjectives, plus particulièrement dans le domaine du stress, du risque et de l'adaptation, dans des contextes de santé, de sécurité et de travail. Ses projets interdisciplinaires touchent les grands déterminants de la santé des populations et leurs interactions, notamment quant aux questions d'anticipation, de perception de risque et de stressors impliquant l'Incertitude, le Sentiment de Maîtrise et de Menace. Les enjeux psychosociaux des désastres, du terrorisme, de la préparation aux urgences et de la gestion psychosociale du risque constituent sa programmation de recherche appliquée. Elle est la directrice scientifique fondatrice de la grappe nationale psychosociale du Centre des sciences pour la sécurité du Canada. Mère de quatre enfants, elle s'implique aussi beaucoup dans la vie communautaire.

Dr Louise LEMYRE, Ph.D. is a Full Professor at the School of Psychology, Fellow of the Academy of Social Sciences of the Royal Society of Canada, and the McLaughlin Research Chair on Psychosocial Aspects of Risk in Population Health at the University of Ottawa, where she leads a research unit on psychosocial analysis of health and wellbeing 'GAP-Santé'. She obtained her Master's degree from the University of British Columbia (UBC) and her doctorate at Université Laval in Social Psychology. She then went for an interdisciplinary postdoctorate in social epidemiology and medical sociology at the British MRC Social Research Unit at the University of London, UK. Her work examines the subjective appraisal and contextual evaluation of social environment, especially with respect to stress, risk and adaptation, in either health, safety or work settings. Her interdisciplinary projects involve the major determinants of population health and their interaction, plus the anticipation and risk perception of stressors, especially as they relate to Sense of Mastery, Uncertainty and Threat. The psychosocial aspects of disasters, terrorism, emergency preparedness and psychosocial management of risks are at the core of her applied research program. She is the founding scientific leader of the national Psychosocial Cluster of the Center for Security Science Canada. Mother of four, she is also very active in the community.
